HM Manufacturing AS9100:2016 REV D Certified

Wauconda, IL— September 22, 2020 — As a leading manufacturer of custom transmission components, we are dedicated to providing our customers with superior services and products. With the foundation of our ISO 9001:2015 standard certification, we have recently completed the AS9100:2016 certification. The AS9100:2016 certifies that HM Manufacturing is accredited to developing and producing products that meet the unparalleled quality and standards for the aerospace industry.

The AS9100:2016 certification process has a multitude of benefits that we are looking forward to providing for our current and prospective customers. This certification ensures consistent decision making, increased efficiency, reduced risks and continual improvement within our facility. Seeing our industry is based on constant growth and advancements, it's vital we utilize cutting edge technology and processes in order to stay compatible with customers' needs.

This certification is designed to help organizations working in the aerospace, aviation and defense industries. Although we've been in the aerospace and defense industry for decades, there are still continuous improvements being made to advance the automation of aerospace related mechanics. It's imperative that each individual gear, spline, shaft and timing belt pulley, that enters an aircraft, has accurate specifications. As we continue to grow our customer base in the aerospace and defense industries, this certification grants us the appropriate requirements to manufacture the highest quality components.
